

DustBind DC25

Indoor / Outdoor Riding arena Dust Control Year Long

- NO WATER REQUIRED
- NO MORE HUMIDITY AND CONDENSATION
- NO COMPACTION OR CLUMPING OF FOOTING

Treatment Overview

DustBind DC25 is formulated to reduce dust on loose and aggregate footing surfaces. This synthetic fluid controls dust by providing a long term wetted surface. Any soil or aggregate can be treated to create a long-term, re-workable solution that coats and agglomerates particulates, weighing them down, like water, without evaporating or freezing. Works well on fine sand and larger aggregates with difficult to treat areas.

Product Application

DustBind DC25 is applied to a lightly loosened surface. Utilizing pressurized spray and metering pumps to ensure even application and product penetration into the footing depth. Persons Chemical Supply is fully equipped to treat any equine application in Western Canada

Indoor or Outdoor

DustBind DC25 doesn't wash away in the rain and is perfectly suitable to both indoor and outdoor riding arenas. With a freezing point of -36 deg. Celsius, DustBind DC25 will control dust in the shoulder seasons and maintain a soft and safe footing for horses. Can also be used to keep the footing loose in winter months.
